

Privacy Workshop

Introduction

Achieving compliance while still providing data utility is a daunting task for many organizations. At Privitar we understand the challenges involved with complex regulations and building internal requirements that fit your goals and objectives. So, we designed our 3-5 day privacy workshop to help you quickly build an action plan that will be the foundation in a solid privacy program.

Our Advisory Services team will work with you helping navigate complex regional regulations while gathering input and requirements from stakeholder focused on driving innovation and empowering the organization to achieve its goals. Our expert privacy consultants collaborate with you during the hands-on workshop sessions. These sessions will result in a tailored actionable program that achieves privacy compliance in a sustainable and scalable manner. Your tailored plan is designed to minimize impact on operations while still creating the value you expect in a very short time frame.

We take a collaborative approach that involves cross-departmental and management teams. Your tailored action plan will outline a uniform and flexible privacy framework along with how technology can support it including the logical architecture. Upon completion your plan will outline how to enable privacy, maintain data utility, and comply with regulatory requirements. Including sharing of best practices in data custodianship, development of privacy process standardization and data efficiency.

The workshop is divided into three stages:

1. **Framing** to help set strategy and bring all stakeholders to the table
2. **Shaping** to layout the how the business can use privacy as an enabler
3. **Activating** putting together an actionable blueprint tailored to your organization providing value incrementally over a two-year time horizon.

When you complete this workshop, you will have a blueprint that outlines a privacy foundation containing how to:

- Apply Consistent Privacy Policies
- Tracing Data Provenance
- Optimize Data Utility
- Audit Policy Enforcement
- Safely Combining Sensitive Data
- Leverage Modern Data Architecture

In just weeks the workshop will help answer:

How can you elevate privacy in the organization to maximize adoption?

How will new privacy regulations affect your business and how can we best counteract any negative impact?

How do your privacy policies compare to your peers?

How you can realistically improve your privacy policies?

How should you design and optimize your privacy program?

Which privacy policies work best in your industry and how do you tailor them to the organization?
